

REDUCING THE IMPACT OF PALLETISED FREIGHT

The Power of Partnership

Palletline has been the driving force for innovation since the company was established in 1992, revolutionising the haulage industry with our multi-hub model, which cuts vehicle mileage, fuel usage and CO2 emissions.

We are committed to reducing our network's impact on our ecosystem and through our ISO accreditations for environmental management and energy usage, we have built impact monitoring into our KPI reporting as standard.

All our hubs have been upgraded to LED lighting controlled by infrared sensors and smart heating systems and our forklift trucks have been fitted with hydrostatic drives to improve surface grip and reduce gas consumption.

- ISO** Accredited with ISO 14001:2015 (Environmental Management) and ISO 50001 (Energy Usage)
-  A 4.5 million mile reduction over a 12-month period when compared to the single-hub model
-  A reduction of 7.5 tonnes of carbon dioxide from our network's emissions
-  Hybrid forklift trucks utilise hydrostatic drives to improve surface grip and reduce gas usage
-  Smart heating and LED lighting controlled by infrared sensors at all our hubs delivering a reduction of energy usage by almost 20%

SHOP LOCAL, SHIP LOCAL

The pallet network model provides efficient freight consolidation, utilising 71% of vehicle capacity across the sector, compared to 51% in other road freight sectors*.

This means fewer vehicles travelling with empty trailers and removes approximately 800 vehicles from our UK roads.

And with over 95 member locations throughout the UK, you are never far from a Palletline member - giving you access to our nationwide services, locally.

*According to the latest figures from the Association of Pallet Networks (APN)
